Natural gas leak safety

Pipelines carry natural gas to homes, schools and businesses. A chemical that smells like sulfur or rotten eggs is added to the gas so you can smell leaks.

Gas leak warning signs:

- A distinctive, sulfur-like odor*
- A hissing, whistling or roaring sound
- Dirt blowing into the air from a hole in the ground
- Continuous bubbling in water
- Dead or dying vegetation (in an otherwise moist area) over or near a pipeline
- A damaged connection to a gas appliance
- An exposed pipeline after a fire, flood or other disaster

*This odor may fade, and not all gas is odorized. So be alert for other warning signs as well.

What to do if you suspect a gas leak:

- Go far away from the area. Do NOT go back until the safety officials say it is safe.
- Do not use electricity or fire — a phone or match could ignite the gas.
- Report the gas leak to the local natural gas utility and call 911.

**Know what's below.
811 before you dig.**
