nationalgrid

Help us protect your community.

You live or work near a National Grid natural gas transmission pipeline. We're doing our part to ensure pipeline safety. Please help us prevent incidents by following the safety tips inside.

We are committed to your safety.

National Grid's natural gas pipelines transport natural gas safely and efficiently to our customers throughout New York and Massachusetts, as well as to liquefied natural gas (LNG) storage facilities in Dorchester, Haverhill, Lynn, Salem, South Yarmouth, Tewksbury and Wareham.

We have a longstanding history as a safety partner, and we are proud of our many initiatives to protect you and your community:

- We continually test, inspect and repair our natural gas pipelines.
- We monitor our pipelines 24/7 for potential gas leaks.
- We conduct trainings and drills with emergency responders to prevent and prepare for gas emergencies.
- We educate excavators and the public about digging safely near gas pipelines.
- We provide gas safety education programs to local schools.
- We identify and manage risks to our gas pipelines, especially those in high-consequence areas. For an overview of our pipeline Integrity Management Program, please visit nationalgridus.com.

Despite our efforts, gas leaks may occur that could lead to catastrophic fires or explosions. We need everyone's help to prevent pipeline damage and reduce the risk of dangerous leaks. Learn what you can do, inside. ➔

Avoid damaging buried gas pipelines.

Natural gas pipeline markers are generally yellow and black. They're placed near pipelines but not necessarily directly on top of them.

If you notice any type of suspicious activity or excavation occurring near a pipeline marker, call the National Grid emergency number on the marker immediately.

In addition to buried pipelines, our natural gas distribution system includes aboveground pipelines that run under bridges built over roads and waterways, other aboveground gas facilities and liquefied natural gas (LNG) transport trailers. These trailers carry LNG over roads and interstate highways to deliver LNG to acceptance sites, where we re-gasify and deliver it through our pipelines during periods of high demand.

Follow these steps for safe excavation and verify that any contractors who work for you do the same:

- 1 **Plan your project and pre-mark your dig area** with white paint, flags and/or stakes.
- 2 **Call 811 or make an online request at least 72 hours before digging**, excluding weekends and legal holidays – it's the law! This free service will arrange for the marking of buried utility lines in your dig area.
 - Dig Safe: **811** or **1-888-DIG-SAFE (344-7233)** | digsafe.com
- 3 **Wait the required time for utilities to locate and mark their lines.** Do not dig until all utility lines have been marked or you have been informed that the area is clear to dig.
- 4 **Respect the marks when digging.** Gas lines are marked with yellow paint or flags.
- 5 **Dig with care** and follow hand-excavating rules. When digging within two feet of either side of the marks, make sure you or your contractor use only small hand tools – not mechanical excavation equipment. If you encounter a cast iron gas pipe at any point in your excavation, stop digging and notify National Grid immediately at **1-800-233-5325**.
- 6 **Call 911 and National Grid if you make ANY contact with a natural gas line**, even if you just nick the pipeline or damage its coating.

If your excavation will cross a cast iron gas main or run parallel nearby, notify the 811 service and National Grid well in advance. Cast iron gas mains in our Northeast communities may become dangerously compromised when the earth near them is moved in any way.

Always contact your state 811 center before digging and for the most current requirements.

Locate major pipelines near you.

Look for markers at road crossings, fence lines and street intersections.

Pipeline markers show the general route of National Grid's buried high-pressure transmission pipelines. Our pipeline markers include our 24-hour emergency phone number. **If you suspect a natural gas leak or see any suspicious activity or excavation occurring near a pipeline marker, call the emergency phone number listed on the pipeline marker immediately.**

You can also find high-pressure transmission pipelines and the name(s) of the pipeline operator(s) near you through the National Pipeline Mapping System (NPMS) at <https://www.npms.phmsa.dot.gov>.

Pipeline markers do not indicate the exact depth or location of transmission lines and are not present in all areas. And neither aboveground markers nor NPMS maps show the location of distribution main lines or service lines that carry natural gas to homes and businesses. So never use pipeline markers or maps as a substitute for contacting 811 to have all utility lines in your dig area located and marked.

Help keep National Grid's rights-of-way safe and clear.

We ask for your help in keeping our pipeline rights-of-way free of construction activities, obstructions and vegetation. Clear rights-of-way allow us to conduct regular pipeline inspections and maintenance. They also provide visibility for aerial pipeline patrols and gas leak detection.

Gas leak safety: recognize, react and report.

1 Recognize gas leak warning signs.

- SMELL** – Natural gas is colorless and odorless. A distinctive, sulfur-like odor is added so that you'll recognize it quickly. This odor may fade, and not all transmission lines are odorized. So don't rely on your nose alone to detect a leak.
- LOOK** – You may see dead or dying vegetation (in an otherwise moist area) over or near a pipeline; continuous bubbling in water; dirt blowing into the air from a hole in the ground; a damaged connection to a gas appliance; or exposed pipeline after a fire, flood or other disaster.
- LISTEN** – You may hear an unusual noise like roaring, hissing or whistling as gas escapes from a pipe.

Leaking natural gas may kill grass or plants, make bubbles in water or throw dirt into the air. Gas pipelines exposed by fires or floods may be a source of leaks.

2 React by immediately leaving the area.

- Assume there's a danger. Warn others and leave the area quickly.
- Do **NOT** use a telephone or any electrical devices, including light switches, garage door openers, doorbells, radios, TVs or cell phones. Do NOT use matches, lighters or cigarettes (including e-cigarettes or vape pens).

BEWARE: A spark from any of these items could ignite leaking gas, causing a fire or explosion.

Danger! A spark from a garage door opener, light switch, cell phone or other electrical device can ignite leaking gas.

3 Report the leak to 911 and National Grid.

- **Be the one to call 911.** Do NOT assume someone else will call.
- From a safe location, dial **911** and call National Grid's gas emergency number at **1-800-233-5325**. Provide the exact location, including cross streets, and let us know if sewer construction or digging activities are going on in the area.
 - Do **NOT** return to the leak area to inform emergency personnel about it. They will identify the source of the leak based on the information you provide by phone.
- Do **NOT** go back inside your home or building until National Grid personnel say it is safe to return.

Once evacuated and in a safe location, call **911** and **National Grid** to report a suspected gas leak or possible pipeline damage – no damage is too small to report.
