

First Responder Utility Safety Training Program

Be ready to respond to the “silent killer.”

Accidental carbon monoxide poisoning kills over 400 people and causes about 50,000 people to visit the emergency room every year in the U.S. Get the knowledge and skills you need to recognize and respond to CO incidents.

First Responder e-Learning Program

The First Responder Utility Safety Training program consists of two courses of study:

The natural gas safety training certification gives you the information you need to safely identify and respond to incidents that involve natural gas pipelines and other natural gas facilities.

The electrical safety training certification gives you the information you need to safely identify and respond to incidents that involve electric power lines and other facilities.

“This job requires continual study and learning to stay on top of every possible situation. National Grid’s utility safety training provides the tools and the confidence to keep firefighters and others safe in natural gas and electrical emergencies.”

Robert Hughes
Chief Instructor, Nassau County Fire Service Academy, Old Bethpage, New York

To report emergencies, **call 911** and **National Grid** immediately. Always **call 911** if you suspect a gas leak!

Know what's below.
811 before you dig.
