

Don't shuffle those boots on a doormat!

Even that tiny static
spark can ignite
leaking gas.

Spark hazards are everywhere!

Even the tiniest spark can ignite leaking gas.

When gas is leaking, make sure NO ONE at the scene:

- Rings doorbells.
- Uses garage door openers.
- Uses a TV remote or any other type of remote controller.
- Operates light switches.
- Turns on or off any appliance or other electrical device.
- Uses telephones, cell phones or pagers.
 - Uses a flashlight (unless it is intrinsically safe).
- Lights a match, uses a lighter or smokes cigarettes, e-cigarettes or vape pens.
- Steps on doormats or shuffles across carpet. Friction from boots could create a spark of static electricity.
- Uses any form of electronic ignition.

Smell Gas. Act Fast. Be the one to call 911.

If you suspect a natural gas leak, call 911 and National Grid immediately.
