New 2017 First Responder Utility Safety Training

Detailed course catalog coming soon.

Solar safety training

With the rapid rise of solar power in the Northeast, there is an increased likelihood that first responders will respond to emergencies involving a solar power system. Our first responder advisory board cited the possible dangers first responders can face without adequate high-quality education, specifically created for first responders, by first responders.

Solar safety training includes:

- ◆ Solar power: Get the facts
- ◆ PV solar system power basics
- ◆ Solar incident response tactics

Group training exercises

Through feedback and research from your peers, we also discovered a need to supplement our first responder e-learning program with offline group training exercises. The FREE group training exercises consist of four natural gas-safety topics with real-world scenarios, Q&A learning practices and tests that can be printed and used by training officers offline.

Group training exercises cover:

- ◆ Gas main leak with no ignition
- ◆ Gas service leak with ignition
- ◆ Gas odor with source unknown
- ◆ Residents overcome by carbon monoxide

Be prepared.
