

Excavator safety near underground natural gas pipelines

Use this poster for employee training.

Smell Gas. Act Fast. Be the one to call 911.
In a gas emergency, call 911 and National Grid
24 hours a day, 7 days a week.
Brooklyn, Queens and Staten Island: 911 and 1-718-643-4050
Nassau, Suffolk and the Rockaways: 911 and 1-800-490-0045

Always call 911 if you suspect a gas leak!

For excavator safety tips, tools and videos, visit ngridssafety.com.

Know what's below. 811 before you dig.

Before you notify New York 811, pre-mark your proposed dig area with white paint, flags and/or stakes.

Help prevent gas pipeline damage.

- **National Grid pipelines deliver natural gas safely and reliably** to homes and businesses across New York and Massachusetts. We regularly inspect these pipelines for corrosion and defects, monitor for leaks and conduct routine maintenance.
- **Hitting a natural gas pipeline has serious consequences.** Even a tiny gouge, scrape, dent or crease to a gas pipe or its coating may cause a leak that could lead to a catastrophic fire or explosion.
- **The greatest risk to gas pipelines is accidental damage during excavation.** We need your help to prevent pipeline damage and reduce the risk of dangerous natural gas leaks.

Notify 811, even if you think you know where lines are buried. It's the law!

- State law requires you to call **New York 811** or make an online request at least **two full working days** before any excavation starts, excluding the date of your request, weekends and legal holidays. Even small or shallow jobs require this.
 - The FREE 811 service will arrange for marking of buried natural gas lines and other utilities so that you can work a safe distance away from them.
 - Call **811** or **1-800-272-4480** | **NewYork-811.com**.
- **Wait the required time** for utilities to locate and mark their lines before you dig. Never assume ANY area is free of underground utility lines.
- **New York 811 will provide all operators' responses** for you to check at managetickets.com or by phone. If no response, do not dig; call 811.
- **Physically locate marked natural gas pipelines by hand digging, or potholing.** If you cannot locate marked pipelines, **STOP** digging and contact National Grid immediately.
- **Do not use mechanical excavation equipment within the "tolerance zone,"** which spans the width of a marked utility plus **24 inches** from each indicated outside edge. **Use ONLY hand tools or vacuum technology within this safety zone.**
- **If your excavation will cross a cast iron gas main or run parallel nearby, notify the 811 service and National Grid well in advance.** Cast iron gas mains in our Northeast communities may be damaged when the earth near them is moved in any way.

Always contact your state 811 center before digging and for the most current requirements.

A gas leak may have a distinctive, sulfur-like odor (but not always).* So be alert for other warning signs as well:

- a hissing, whistling or roaring sound
- dirt blowing into the air from a hole in the ground
- continuous bubbling in water
- dead or dying vegetation (in an otherwise moist area) over or near a pipeline
- an exposed pipeline after a fire, flood or other disaster
- a damaged connection to a gas appliance

*The odor of natural gas comes from a chemical additive called mercaptan. Be aware that some natural gas is not odorized, so some leaks may not be detectable by smell alone. Additionally, chemical or physical processes may strip the odorant from natural gas so that the gas no longer smells. This is known as "odor fade."

Signs of a gas leak

Leaking natural gas may throw dirt up into the air, kill grass or plants, or make bubbles in water. Gas pipelines exposed by fires or floods may be a source of leaks.

If you contact a natural gas pipeline and/or suspect a gas leak:

- **Do NOT crimp or tape a broken pipe,** or otherwise attempt to stop the flow of gas. Leave the excavation open.
- **Do NOT use matches, lighters, cigarettes, vape pens, light switches or anything electrical** – not even a phone or garage door opener.
- **Do NOT turn off engines or generators,** as a spark from the ignition could ignite leaking gas. Warn others and leave the area quickly.
- **Do NOT operate underground pipeline valves.**
- **From a safe location, call 911 and National Grid immediately.** Call even if there is no visible damage to the pipeline. (Excavators are required by law to call 911 if gas is escaping.) In the New York Metro area, also call 811.
- **Report the incident to your supervisor.**
- **Stay away from the area** until National Grid personnel say it is safe to return.

Watch out around pipeline markers.

- **High-visibility yellow markers with National Grid's 24-hour emergency phone number** indicate the general location of our high-pressure natural gas pipelines.
- **If you notice any type of suspicious activity or excavation occurring near a pipeline marker** or you see a damaged marker, call the National Grid emergency number immediately.
- **For security purposes, these markers do not show the exact location, path, depth or number of gas pipelines in the area.**
- In addition, pipelines may not follow a straight course between markers.
- **You can also find the general location of high-pressure natural gas transmission pipelines near you** through the National Pipeline Mapping System (NPMS) at <https://www.npms.phmsa.dot.gov>.
- **Never use pipeline markers or maps as a substitute for contacting 811 before digging.** If your 811 locate indicates you will be digging within **15 feet** of a high-pressure natural gas transmission pipeline, National Grid **MUST** be on-site during the excavation.

In addition to buried pipelines, our natural gas distribution system includes aboveground pipelines that run under bridges built over roads and waterways, other aboveground gas facilities and liquefied natural gas (LNG) transport trailers. These trailers carry LNG over roads and interstate highways to deliver LNG to acceptance sites, where we re-gasify and deliver it through our pipelines during periods of high demand.

Tear along perforated line.

Respond safely to natural gas emergencies.

Keep this card handy in your vehicle visor or glove box.

Gas leak signs: A gas leak may have a distinctive, sulfur-like odor (but not always). Other signs may include a hissing, whistling or roaring sound; dirt blowing into the air from a hole in the ground; continuous bubbling in water; dead or dying vegetation (in an otherwise moist area) over or near a pipeline; an exposed pipeline after a fire, flood or other disaster; or a damaged connection to a gas appliance.

1. Leave equipment; do NOT turn off engines or generators. Warn others and leave the area quickly.

2. Do NOT use matches, lighters, cigarettes, vape pens, light switches or anything electrical – not even a phone or garage door opener.

3. Do NOT operate underground pipeline valves or stop the flow of gas. Leave the excavation open.

4. From a safe location, call 911 and National Grid immediately. (Excavators are required by law to call 911 if gas is escaping.) In the New York Metro area, also call 811.

5. Report the incident to your supervisor.

6. Stay away from the area until National Grid personnel say it is safe to return.

Call 911 and National Grid if you suspect a gas leak or if you make ANY contact with a natural gas line, even if you just nick the pipeline or damage its coating.

Dear Excavator:
Digging without an 811 locate ticket is unlawful and dangerous! New York state law requires excavators to contact New York 811 at least **two full working days** (excluding the date of your request, weekends and legal holidays) before you start to dig. When you contact this free service, National Grid will be notified of your intent to excavate and will mark our buried facilities in your dig area. Dial **811** or **1-800-272-4480** or visit **NewYork-811.com** for any digging on public or private property.

Pre-mark your excavation area in white

Pre-mark your dig area with white paint, flags and/or stakes. If National Grid gas pipeline facilities are within the pre-marked excavation area, we will mark the location of these facilities with yellow paint, flags or other physical means. For larger projects, a National Grid representative may contact you to coordinate scheduling of work as required by state law. Facility location marks will not reflect any gas pipeline protrusions, appurtenances, fittings or valves; nor will they indicate facility depth because of grade changes that may have occurred after gas facilities were installed.

Once gas pipelines are marked, dig with care

Excavators must determine the exact location of all marked underground facilities using safe and acceptable means. The law prevents powered or mechanized excavation within 24 inches on either side of the indicated outside edge of underground facilities. **Any excavation required in this zone should be performed very carefully with hand tools only and without damage to the facility.** Damage includes but is not limited to nicks, dents, cuts, scrapes or gouges to the marker balls, tracer wire, pipe surface or coating, seemingly insignificant damage can lead to a future pipeline failure. Excavators must also exercise reasonable care to support gas pipelines during excavation and backfill activities to avoid pipes being damaged by their own weight or excavation compaction. Excavators should notify National Grid whenever cast-iron gas pipe is exposed or falls within an excavation trench's angle of repose.

Excavator information sessions and training programs

Visit **NewYork-811.com** to schedule information sessions on the Call Before You Dig Program, as well as to learn about New York state-mandated excavator safety training. Click on "Liaisons" under the Information section to request a free damage prevention seminar for your group or organization.

Thank you.

Sincerely,

Paul Terjesen

For additional excavation safety training tips, tools and videos, visit ngridafety.com.

Enroll in our **FREE** online excavator safety course today at ngridafety.com/utility-safety-course.

- Learn to dig safely around natural gas pipelines
- Prevent costly accidents and downtime
- Earn a certificate of completion at your own pace

Note: This course is not part of New York's required Excavator Training offered by the state's one-call centers.

Backfill for pipeline safety

- Remove sharp objects, trash, debris, wire and rocks from the trench.
- Backfill a 6-inch radius of padding sand around natural gas pipelines.
- Remove rocks more than 3 inches in diameter from the padding sand level to grade.
- Use only clean backfill materials – no paving materials, cinders, ash or flowable fill.
- Compact soil in 12-inch lifts up to 6 inches above the pipe to a density comparable to the surrounding soil.
- Hand tamp around fittings where mechanical compaction cannot be used.
- Do not damage the copper wire that may be running near a plastic natural gas pipeline.

Plan ahead to protect cast iron gas mains

Cast iron gas mains are supported by the soil around them. **They can be damaged when the earth near them is moved in any way.** When possible, work with National Grid to plan your excavation to avoid damage to cast iron mains.

Have you notified 811 yet?

nationalgrid

Call 811 or make an online request before you start digging. It's the law!

Five steps for safe excavation

1. **Plan your job and pre-mark your dig area** with white paint, flags and/or stakes.
2. **Call 811 or make an online dig ticket request before any excavation starts: 811 or 1-800-272-4480 | NewYork-811.com.**
3. **Wait the required time** for utilities to locate and mark their lines: In New York, **at least two full working days**, excluding the date of your request, weekends and legal holidays.
4. **Respect the marks** and maintain them while digging.
5. **Dig with care.** Physically locate marked utility lines by potholing.

Always contact your state 811 center before digging and for the most current requirements.

Smell Gas. Act Fast. Be the one to call 911.
In a gas emergency, call 911 and National Grid 24 hours a day, 7 days a week.
Brooklyn, Queens and Staten Island: 911 and 1-718-643-4050
Nassau, Suffolk and the Rockaways: 911 and 1-800-490-0045
