

Do your students know what to do?

Dear Driver Education Instructor:

Would your students know what to do if they crashed into a utility pole? Are they prepared to react safely if they encounter downed power lines on the roadway?

Most motorists don't know what to do in these situations, and driver education courses typically do not cover power line emergencies. We'd like to change that!

We invite you to order our new *Power line safety for drivers* teaching kits. These **FREE** kits provide information to teach your students how to recognize dangerous conditions and, most importantly, how to stay safe. Each kit includes:

- **20 brochures** with critical steps (sample enclosed)
- **20 glovebox cards** for quick reference in an emergency (sample enclosed)
- **1 downloadable Instructor's guide** with background and discussion points

Order FREE safety kits for your classes at drivers.ngridsafety.com, our new power line safety website. Or, scan the QR code below.

We hope these power line safety materials will help support your commitment to saving lives and preventing injuries on our roadways. Thank you for all that you do to keep new drivers safe.

Sincerely,

National Grid
Electric Public Safety Awareness Team

P.S. We know your curriculum is packed, so we've kept these materials short and to the point. You can present this critical safety information in just 5 to 10 minutes.
